

# PRESS RELEASE

## **Boxcryptor for Windows Phone, Windows RT, and BlackBerry 10 announced**

Just in time for the „Safer Internet Day“ and “The Day We Fight Back” – action days against internet surveillance - Secomba GmbH, developer of the encryption solution Boxcryptor, announced to release Boxcryptor on further mobile platforms. In the course of the first quarter of 2014 the simple and secure encryption for Dropbox and other storage providers will then be available for Windows Phone, Windows RT, and BlackBerry 10.

**Augsburg, 02/11/2014:** The encryption solution Boxcryptor is already available on many platforms. Windows, Mac OS X, Android, iOS and Google Chrome users can already store their data securely in the cloud. The German company now announced to release Boxcryptor for Windows Phone, Windows RT and BlackBerry 10 until the end of this quarter. Then all major platforms are supported and users can enjoy even greater flexibility when using Boxcryptor.

Right from the beginning, Boxcryptor will support the largest providers like Box, Dropbox, Google Drive, Microsoft OneDrive (formerly SkyDrive) on the new platforms - and 18 other cloud storage providers, for example SugarSync or Egnyte.

Robert Freudenreich, founder and CTO of Secomba explains: “In the last few months we have worked hard on the new versions and are very excited to announce that we will release Boxcryptor for Windows Phone, Windows RT and Blackberry very soon. A lot of our users have asked for support of these platforms and we are pleased that they can benefit from the security of our solution on even more devices soon”.

Boxcryptor is available in a free basic version for private users. Those who want to take advantage of all functions (e.g. file name encryption), have the option to upgrade to the Unlimited Personal license (€36 / year) or the Unlimited Business license (€72 / year). For companies and teams starting from 5 users there are also special company packages available (from €6,40 / user / month).
