

PRESS RELEASE

Boxcryptor adds a new business feature and now supports Active Directory

Boxcryptor, the award winning German encryption solution for OneDrive, Dropbox & Co, now offers a connection to external user directories like Active Directory and hence makes it easy for corporations to manage their users. With this integration, the software - originally built for the consumer market – continues to implement features for its growing business customer segment.

Augsburg, 08/13/2014: Companies using Boxcryptor and who manage their users with Active Directory or LDAP can now benefit from the new external user directory integration. This integration was implemented almost exactly one year after the release of the new Boxcryptor generation last summer. Since the release of this new generation, it was already clear that the – originally consumer-focused - company heads towards the business market. The German security expert is already offering several team options like policies or a centralized management. Still, these features did not make it easy enough for large teams with a complex or changing user structure.

The support for Active Directory now allows system administrators to sync their Boxcryptor users with the users from their directory. New users are provisioned automatically as soon as they are created in the user directory and accordingly removed once they are deleted from the user directory.

Andrea Pfundmeier, CEO of Boxcryptor explains: "We listen a lot to our customers in order to identify and understand their personal and business needs in regard to cloud storage and security. A frequent feedback we got was the demand to minimize the initial set up efforts and the ongoing management overhead. Therefore we integrated Active Directory support to enable the administrators to focus on more important things."

This new feature makes Boxcryptor not only compatible for small groups but also opens up the wider field of larger teams and companies who – for example – rely on Dropbox for Teams or OneDrive for Business and who are in need of a reliable security solution to protect their data.

Boxcryptor is available as a free basic version for personal use. Corporations and teams also can benefit from the highest level of security made in Germany, with a focus on ease of use with its Company Packages. In contrast to the single user licenses, the Company Package offers additional features such as Master Keys, password reset, policies and a centralized management console.
