

PRESS RELEASE

Boxcryptor releases new Mac version and now supports Yosemite and iCloud Drive

Today Boxcryptor, the encryption solution for Dropbox, Google Drive & Co released a new Mac OS X version. The new release offers – next to Yosemite, iCloud Drive and Spotlight support - an enhanced stability and improved experience for its Mac users.

Augsburg, 09/18/2014: The German security company Secomba GmbH published a new 2.1 version of its Mac OS X version. Users of Apple's popular operating system now benefit from a better stability and enhanced user experience of the awarded encryption solution.

Next to improved usability and stability, the new Boxcryptor version also supports iCloud drive, Apple's cloud storage solution and allows users to securely store their files in the cloud. This is especially valuable for Apple users who want to store sensitive files as private photos and videos or business information. As this new version was released two weeks after intimate photos of celebrities stored in the iCloud were leaked in the internet, a lot of users were waiting for an easy solution to encrypt their files before uploading them to the cloud.

The improved Mac version allows users to fluently encrypt their files on OS X 10.10 Yosemite. Moreover, in the past, a lot of users were waiting for Spotlight support which helps them to make their encrypted files searchable. The new Boxcryptor for Mac OS X version now supports Spotlight and fulfills a long-awaited requirement of the software. Smaller improvements are a better saving and loading of preferences, improved offline support and enhanced stability in case of a weak internet connection.

Robert Freudenreich, CTO of Boxcryptor explains: "We have been working hard on this new Mac version during the past months. The biggest part are major internal code improvements which help us to deliver new versions faster and better in the future. We also got a lot of feedback from our beta testers which allowed us to deliver a great final version".

Boxcryptor is available as a free basic version for personal use. Corporations and teams also can benefit from the highest level of security made in Germany, with a focus on ease of use with its Company Packages. In contrast to the single user licenses, the Company Package offers additional features such as Master Keys, password reset, policies and a centralized management console.
