PRESS RELEASE

New Boxcryptor for iOS app allows to encrypt iCloud and integrates TouchID

Boxcryptor, the cloud-optimized encryption solution, is now available in a new iOS version. The most important new feature of the German security solution is support for Apple's iCloud. This allows iPhone and iPad users to encrypt their files before uploading them to the Apple server. Moreover the new app offers TouchID integration and offline support.

Augsburg, 04/07/2015: Today the German IT security company Secomba released their new Boxcryptor for iOS app. The most important improvement of this version is support of Apple's iCloud. From now on, iPhone and iPad users can encrypt their files with the awarded encryption software before storing them on Apple's servers. Besides iCloud, Boxcryptor for iOS is also backing a wide range of other providers including Dropbox, Google Drive, and OneDrive.

Another new feature is the integration of TouchID, which allows users to use their fingerprint as password alternative. This allows users to open the app in a simpler and faster way without having to remember a long password – the fingerprint will do. Moreover, files from other apps can now be opened in a more convenient way in the Boxcryptor app: Thanks to the "document picker" integration, the user does not have to complicatedly switch between the apps anymore to open another file. For users who want to utilize the app on the go, Boxcryptor for iOS now offers offline support. Files and directories which were already retrieved by the user, remain available even without internet connection.

Additionally to these new features, Boxcryptor for iOS got a new, intuitive user interface, which is also optimized for the new iPhone 6 and iPhone 6 Plus devices. Furthermore, the update includes the integration of the popular password manager Last Pass and 1Password. With this integration, users can generate and use long and complicated – and therefore more secure - passwords in an easy way. Thanks to the password manager they do not have to worry about sacrificing comfort while entering the password on a mobile device.

Robert Freudenreich, CTO of Boxcryptor explains: "We have been working intensively on the new version of our iOS app during the past months. Besides the new iCloud support, we accomplished important internal code improvements that help us to deliver new versions faster and better than in the past. Now our iOS users can look forward to receiving faster updates in the future"

Boxcryptor is available in a free basic version for personal use or single user licenses with more features. Corporations and teams also can benefit from the highest level of security made in Germany, with a focus on ease of use with its Company Packages. In contrast to the single user licenses, the Company Package offers additional features such as Master Keys, password reset, policies and a centralized management console.
