

## PRESS RELEASE

### **Boxcryptor supports Amazon Cloud Drive on all main platforms now**

Boxcryptor, the cloud-optimized encryption solution supports also Amazon Cloud Drive now. The new provider is already supported on all main platforms and allows users of Amazon Cloud Drive to secure their photos and files on their own device before uploading them to the Amazon servers.

**Augsburg, 06/11/2015:** The German IT security company Secomba officially added support for Amazon Cloud Drive. Now users can secure their Amazon Cloud Drive files with Boxcryptor Portable on Windows, Mac OS X, Linux and with the Boxcryptor native apps on Android and iOS. Boxcryptor encrypts the files locally before uploading them to the cloud drive of the large online retailer. Besides Amazon Cloud Drive, Boxcryptor is also backing a wide range of other providers including Dropbox, Google Drive, iCloud and OneDrive. Moreover, the Boxcryptor team is already working on support for Amazon S3 and Copy, which will be available within the next weeks.

Amazon Cloud Drive is integrated via Amazons own API. Robert Freudenreich, CTO of Boxcryptor explains: "As Amazon does not offer sync clients for desktop platforms, we decided to integrate Amazon Cloud Drive in our Portable version, which directly accesses the provider's API without having to rely on a sync client. Besides being able to encrypt their Amazon Cloud Drive, users also finally have a software for Windows, Mac OS X and Linux to access their Amazon Cloud Drive files."

On the mobile side, Amazon Cloud Drive was directly implemented in the Boxcryptor apps for iOS and Android which are available in the app stores for free.

Boxcryptor is used by private users and businesses from all branches in more than 190 countries. It is available in a free basic version for personal use. Full-featured single and team licenses are available on a monthly or yearly basis. Corporations also can benefit from the highest level of security made in Germany, with a focus on ease of use with the Boxcryptor Company Packages. In contrast to the single user licenses, the Company Package offers additional features such as Master Keys, password reset, policies and a centralized management console.
