

PRESS RELEASE

Boxcryptor update allows mobile editing of encrypted documents inside third party apps

After an update, Boxcryptor, the encryption solution for numerous cloud providers, allows opening, editing and saving encrypted documents on mobile devices directly inside apps of third party providers, such as Word, Excel, or PowerPoint. This feature is available for all users of the newest iOS or Android version of Boxcryptor.

Augsburg, XX/XX/2016: From now on Boxcryptor users can work with their encrypted Microsoft Office documents – or with Apple's Numbers, Pages, or Keynote – right inside the chosen app, simple and secure. They do not have to take the detour to the encryption app, but can open, edit and save files right inside the third party app, by choosing Boxcryptor and their cloud provider as storage location. This simplifies workflows on mobile devices for those who have to work with their encrypted data on the move. The user can work with his favorite app as usual, while the encryption takes place in the background.

Boxcryptor enables users to encrypt their data with „zero knowledge“-standard before uploading it into the cloud. Therefore, the data is protected from any kind of unauthorized access. The files that are stored at the cloud provider are encrypted at all times. Even in the case of a data breach, no one could take advantage of the data.

Robert Freudenreich, founder and CTO of Secomba GmbH explains: "Data security works best when it doesn't interrupt users in their familiar workflow. This is our purpose: data security at its best and great user friendliness. This is why we are very pleased to be able to provide our users with this new feature."

Boxcryptor is available for private use and for companies and it is much appreciated by customers in various industries in over 190 countries. A basic version, where you can encrypt one cloud and use Boxcryptor with two devices, is available for free for private use. Single- and team licenses with more functions are available on a monthly or yearly basis. For companies, we offer special company packages with extended team, audit and central management features.
