Boxcryptor now official Dropbox Premier Technology Partner

Boxcryptor, the cloud-optimized encryption solution, announced today that it has entered into a partnership with Dropbox and is now one of its selected Premier Technology Partners. The Dropbox Partner Program enables customers to benefit from selected and proven technology solutions. Boxcryptor can support more than 150,000 Dropbox Business customers around the world, by adding additional security to their files with "zero knowledge" encryption.

Augsburg, 05/31/2016: Today, the German IT security company Secomba – manufacturer of the encryption software Boxcryptor – announced that it has entered a partnership with Dropbox as one of the company's Premier Technology Partners. The Dropbox technology partner program consists of selected services that support Dropbox Business customers to make the most of their cloud storage. With Dropbox Business, users can share files and collaborate across multiple devices. Additionally, several hundreds of existing third-party solutions can be integrated to Dropbox.

With the new partnership with Boxcryptor, Dropbox users have access to an additional proven security solution. Boxcryptor allows Dropbox customers to benefit from all Dropbox features with an added layer of security with its "zero knowledge" encryption solution. This gives cloud users the option to hold their own encryption keys to access and decrypt their data – regardless of where it resides. Separating the physical storage and the cryptographic access to the files will enable users to accelerate adoption of cloud services like Dropbox. Boxcryptor has integrated parts of the solution with the Dropbox Business API and will add further improvements in close collaboration with Dropbox.

Andrea Pfundmeier, founder and CEO of Boxcryptor explains:
"We are very happy about partnering with Dropbox as Premier Technology Partner. We are excited to help customers around the world benefit from Dropbox Business and Boxcryptor technology at the same time. Over the past years we learned that many European companies are still reluctant to embrace cloud services, although they know that providers, such as Dropbox, offer them a secure and easy way to collaborate. Dropbox and Boxcryptor is a strong combination of a best in class collaboration platform and an additional security layer for customers who want to hold their own encryption keys."

Boxcryptor is an encryption solution for private users and businesses from all industries, with satisfied customers on all continents. Corporations can benefit from the highest level of cloud security, with a focus on ease of use. Boxcryptor Company Packages offer additional features, such as Master Keys, password reset, policies, or a centralized management.
